

## **Cushing Technologies Inc. Welcomes Robert Bryant**

*February 4, 2010*

**Cushing, Maine** – Robert Bryant of Rochester, Indiana, has joined Cushing Technologies Inc. as the Account Manager for Ohio, Indiana, Illinois, Iowa, Kentucky, and nearby states. Mr. Bryant brings more than twenty seven years of experience in public safety communications and dispatching to CTI. For the past five years, Mr. Bryant sold and serviced Cushing Technologies in Indiana and Kentucky for a software reseller.

Mr. Bryant has an extensive background in public safety. He served as president of Indiana NENA (National Emergency Number Association), as a County 911 Director, jail commander, and a road officer. His experience is invaluable when installing and implementing CTI software solutions or working with CIT customers to resolve problems. He also provides an experienced user's perspective for future enhancements to CTI products.

"Having Robert join CTI is the best of all worlds," says Cushing Technologies director Austin Donaghy. "We have worked together for several years and I welcome his decision to join us full time. The states he covers are the nucleus of our current customer base. Knowing those customers are in the capable care of Robert allows us to concentrate on developing other market areas."

Outside of his life in public safety communications and information systems, Mr. Bryant has held his license to officiate at Indiana high school football and wrestling competitions for sixteen years. He and his wife Debra are intensely proud of their son, currently serving in the

U.S. Marine Corps, and their daughter whose days are filled raising the Bryant's three active grandchildren.

Cushing Technologies Inc. launched its Public Safety Information Management System (PSIMS) in 2004. Currently, more than forty sites, including municipal and county law enforcement and 9-1-1 agencies, use PSIMS software.

Cushing Technologies Inc. was founded by Austin Donaghy, former Director of Development and VP of Wireless Computing for Software Corporation of America Inc. (SCA) and developer of SCA's successful TalkThru CAD and RMS systems. SCA was purchased by Motorola in 1999.
